Michael Fraser | CEO | Refactr

CI/CD Pipelines for DevSecOps With Hybrid Cloud

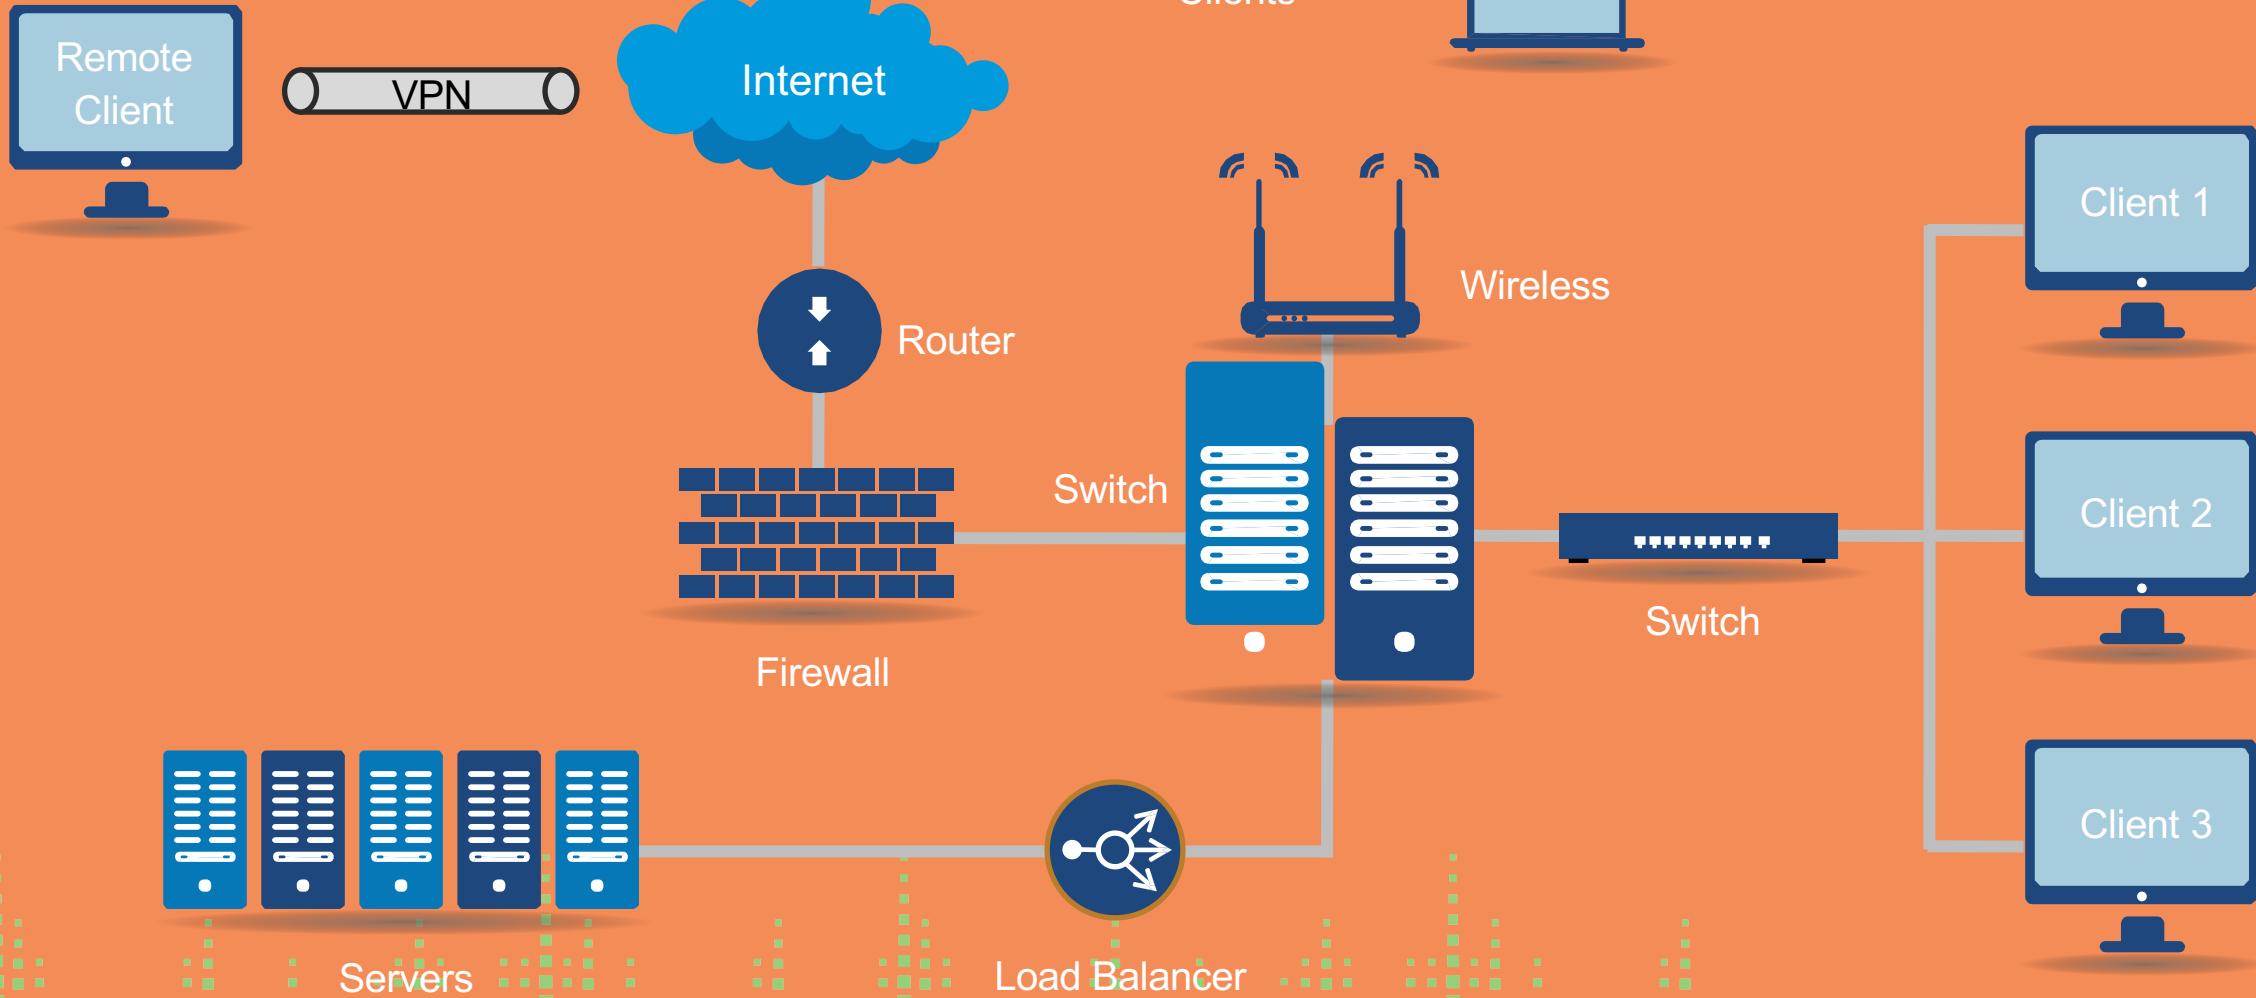

Intro

- US Air Force Veteran
 - F-15 C/D Armament Specialist
 - Cybersecurity Engineer
- Refactr
 - Co-Founder | CEO
- Master of Computer Science
 - Seattle University
- Adjunct Instructor
 - Seattle Central College
- Thought Leader | Speaker
 - All Day DevOps
 - DevOps Days Tampa
 - RedHat AnsibleFest

Traditional IT

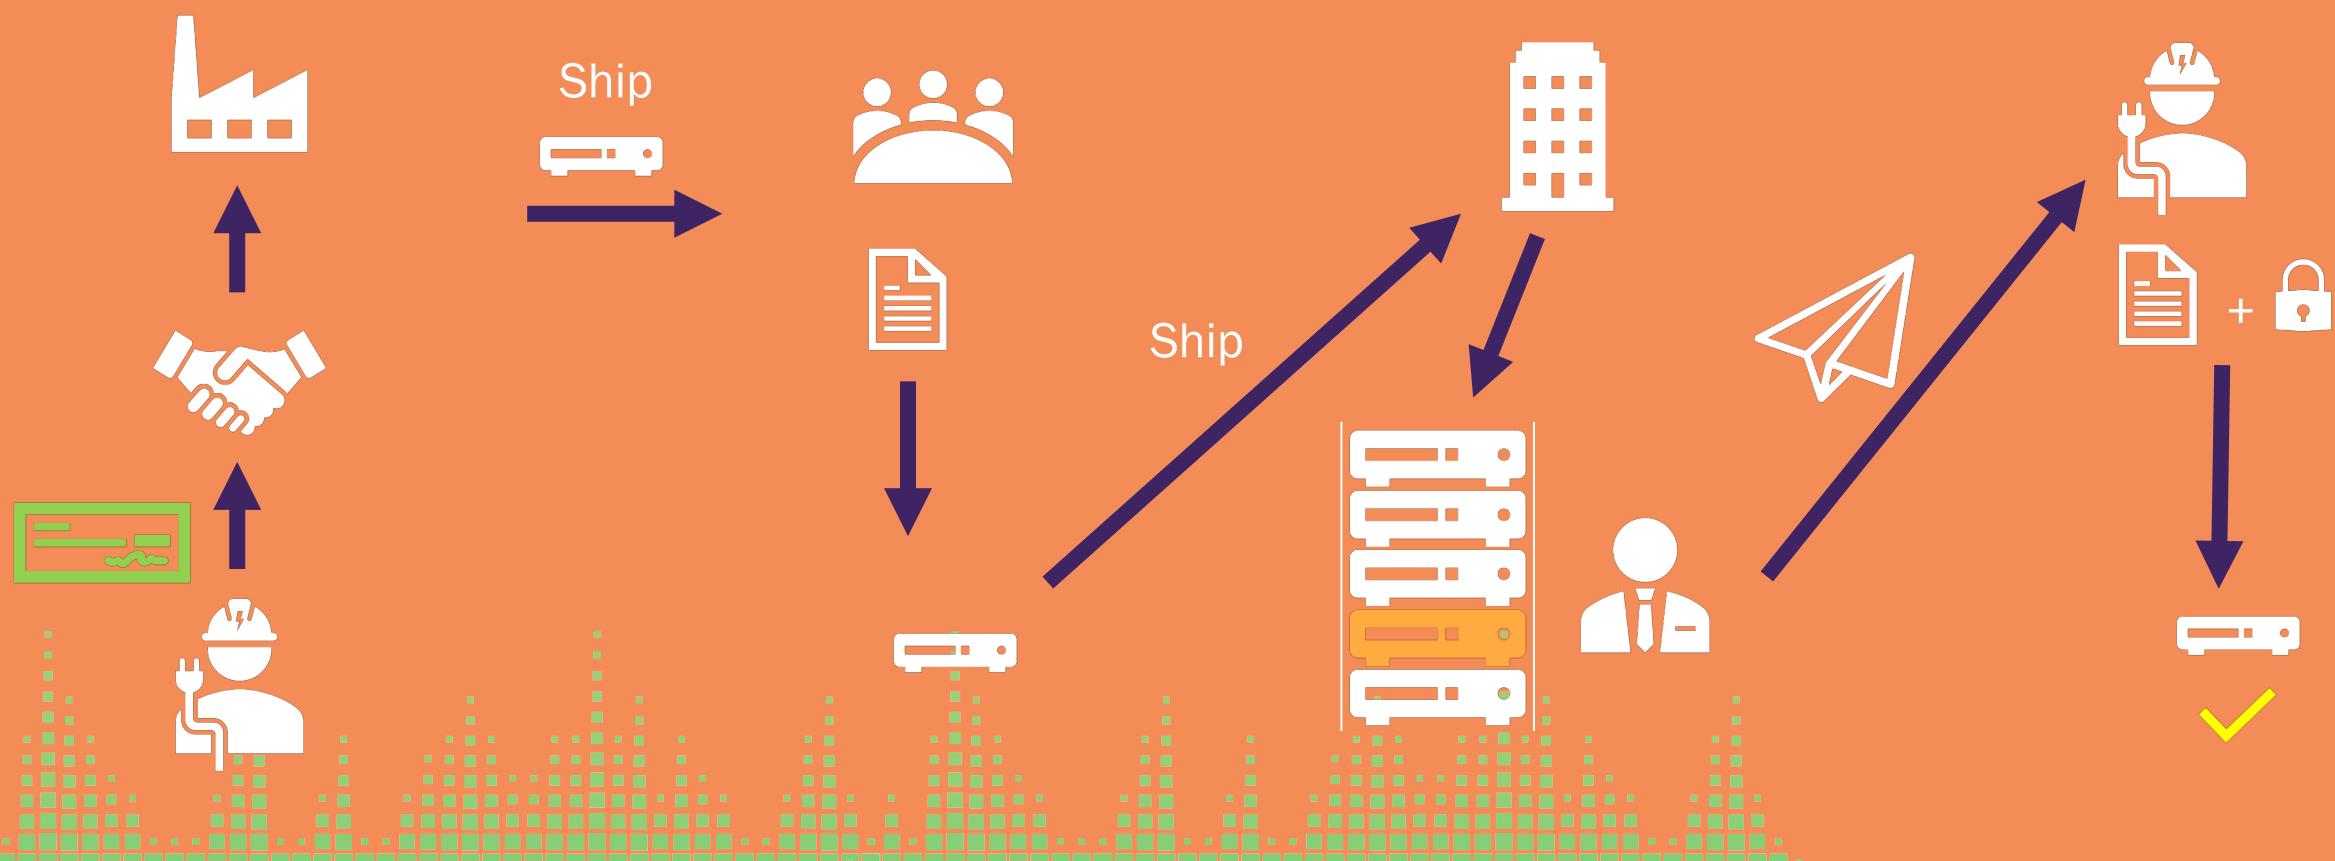

Deploying Traditional IT

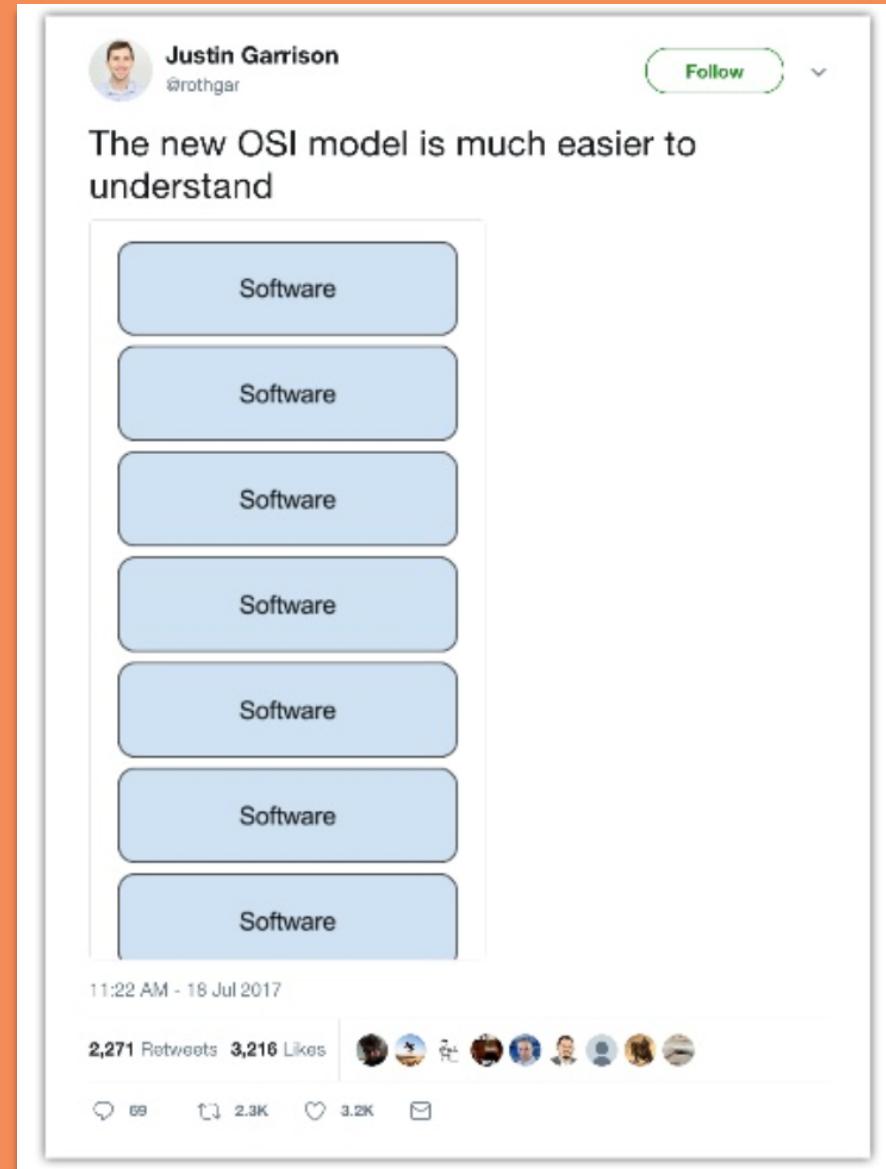

Procure

Pre-configure

Rack & Stack

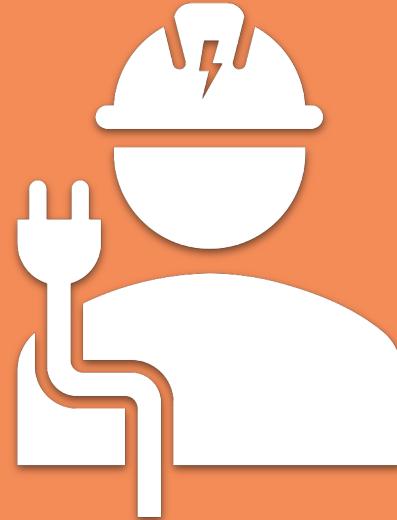

Final Configuration

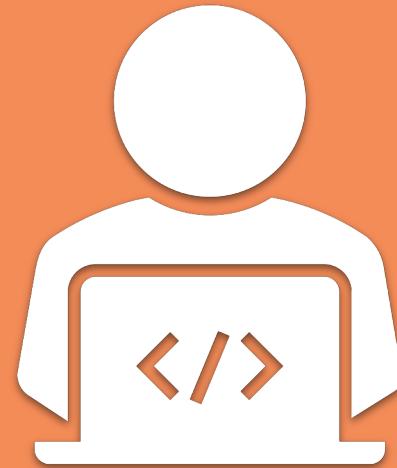

TRADITIONAL IT = LEGACY

What is IT as Code?

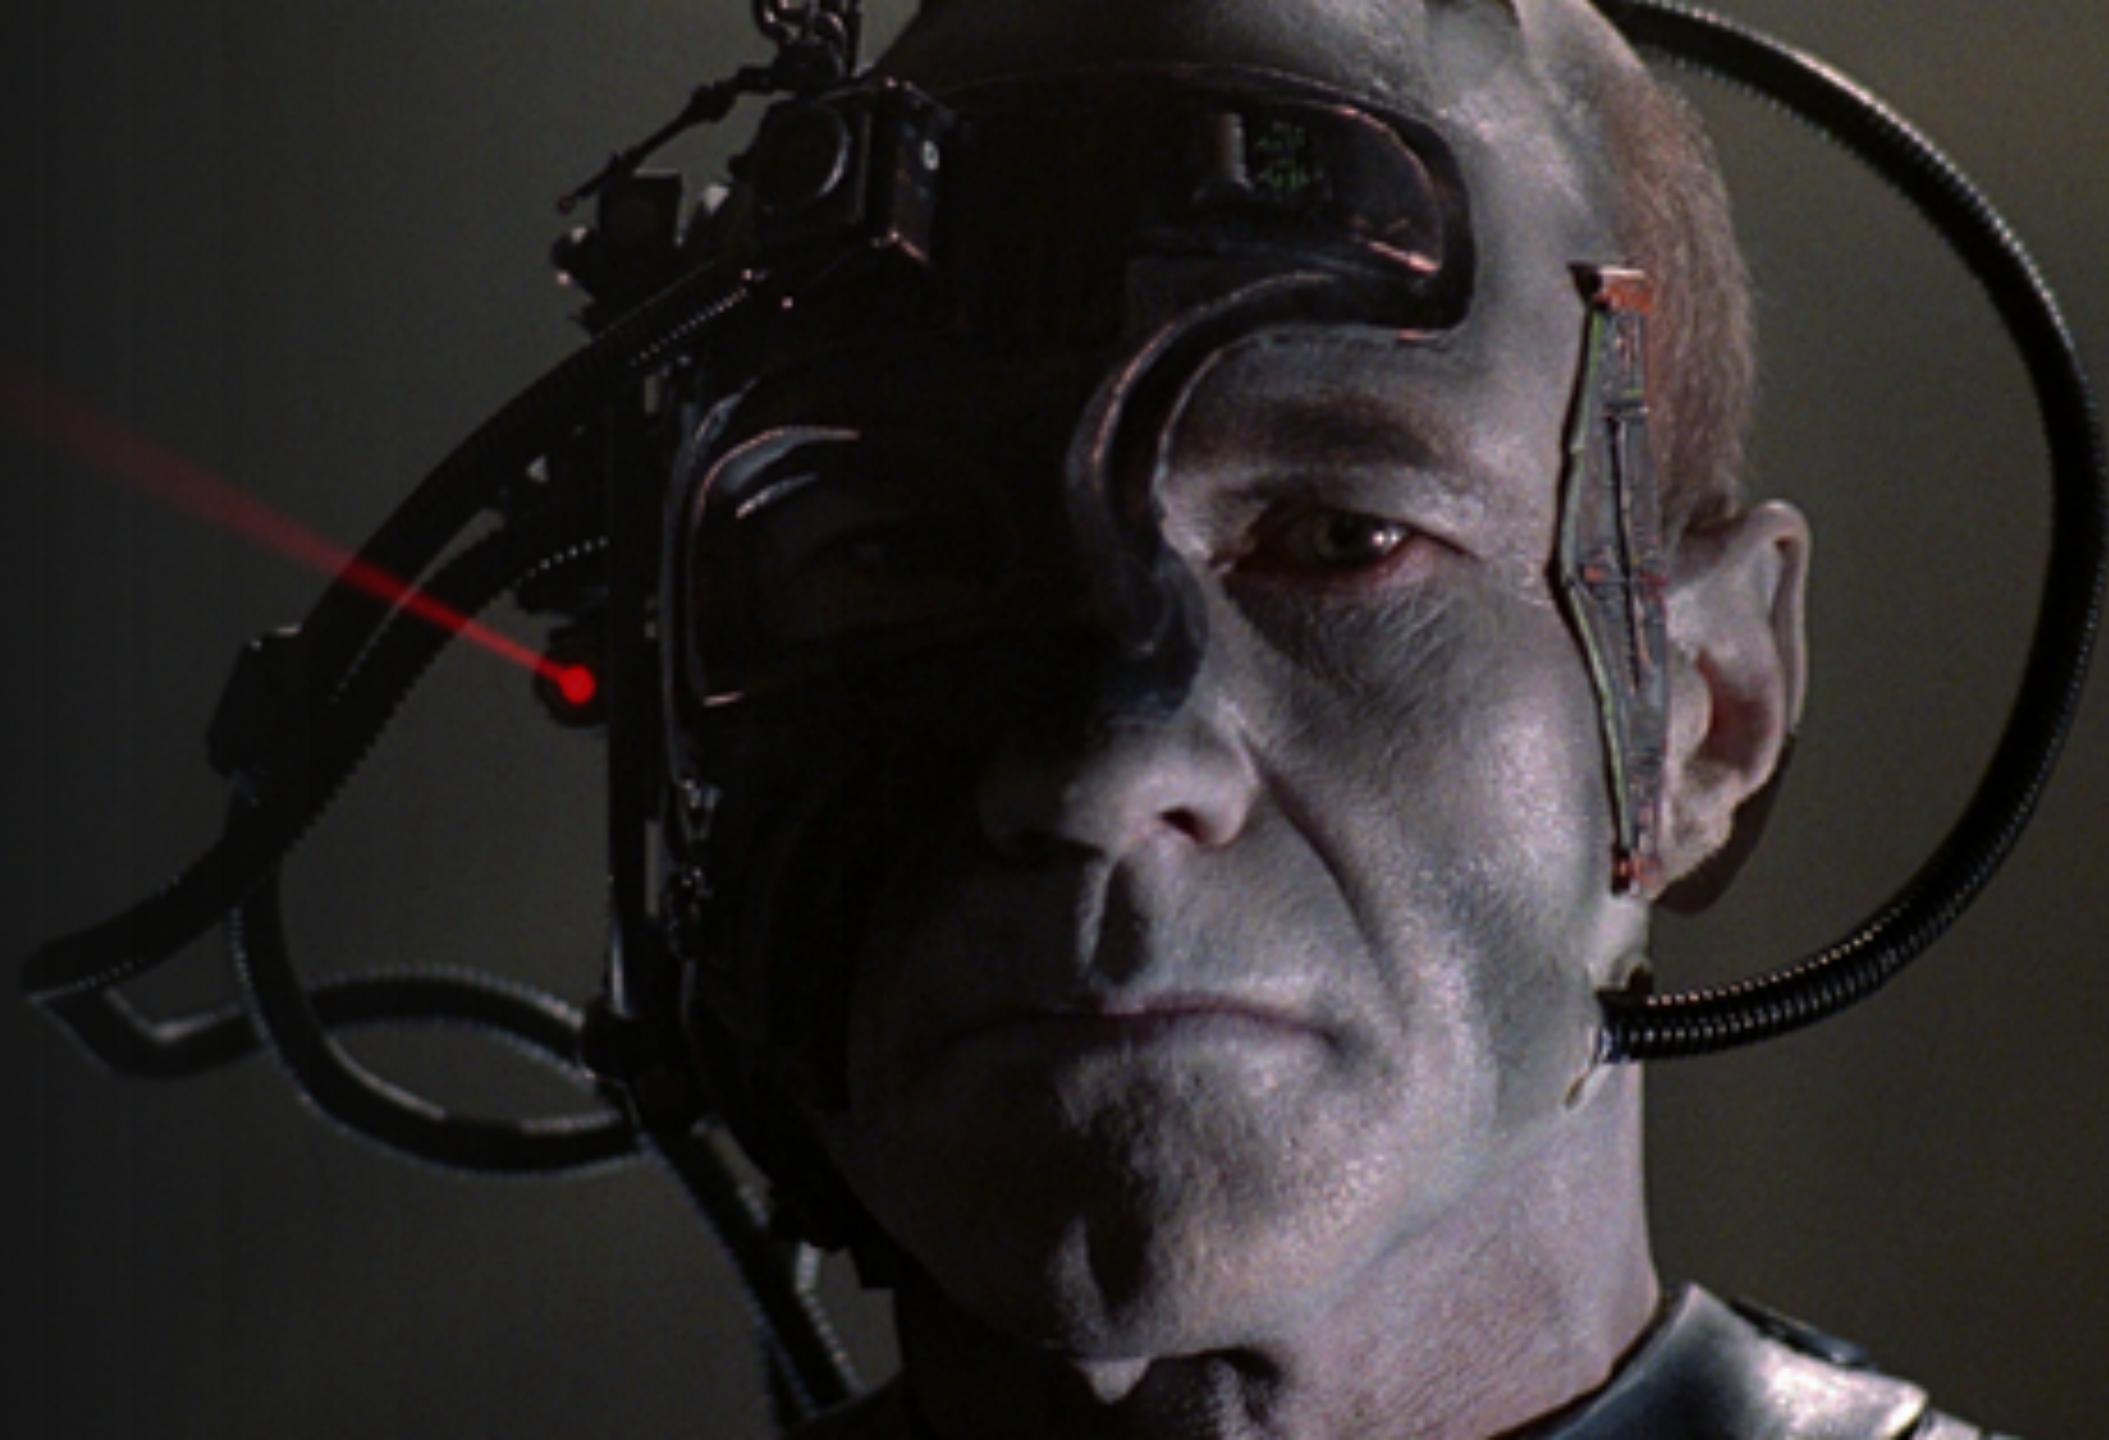

Traditional IT

VS.

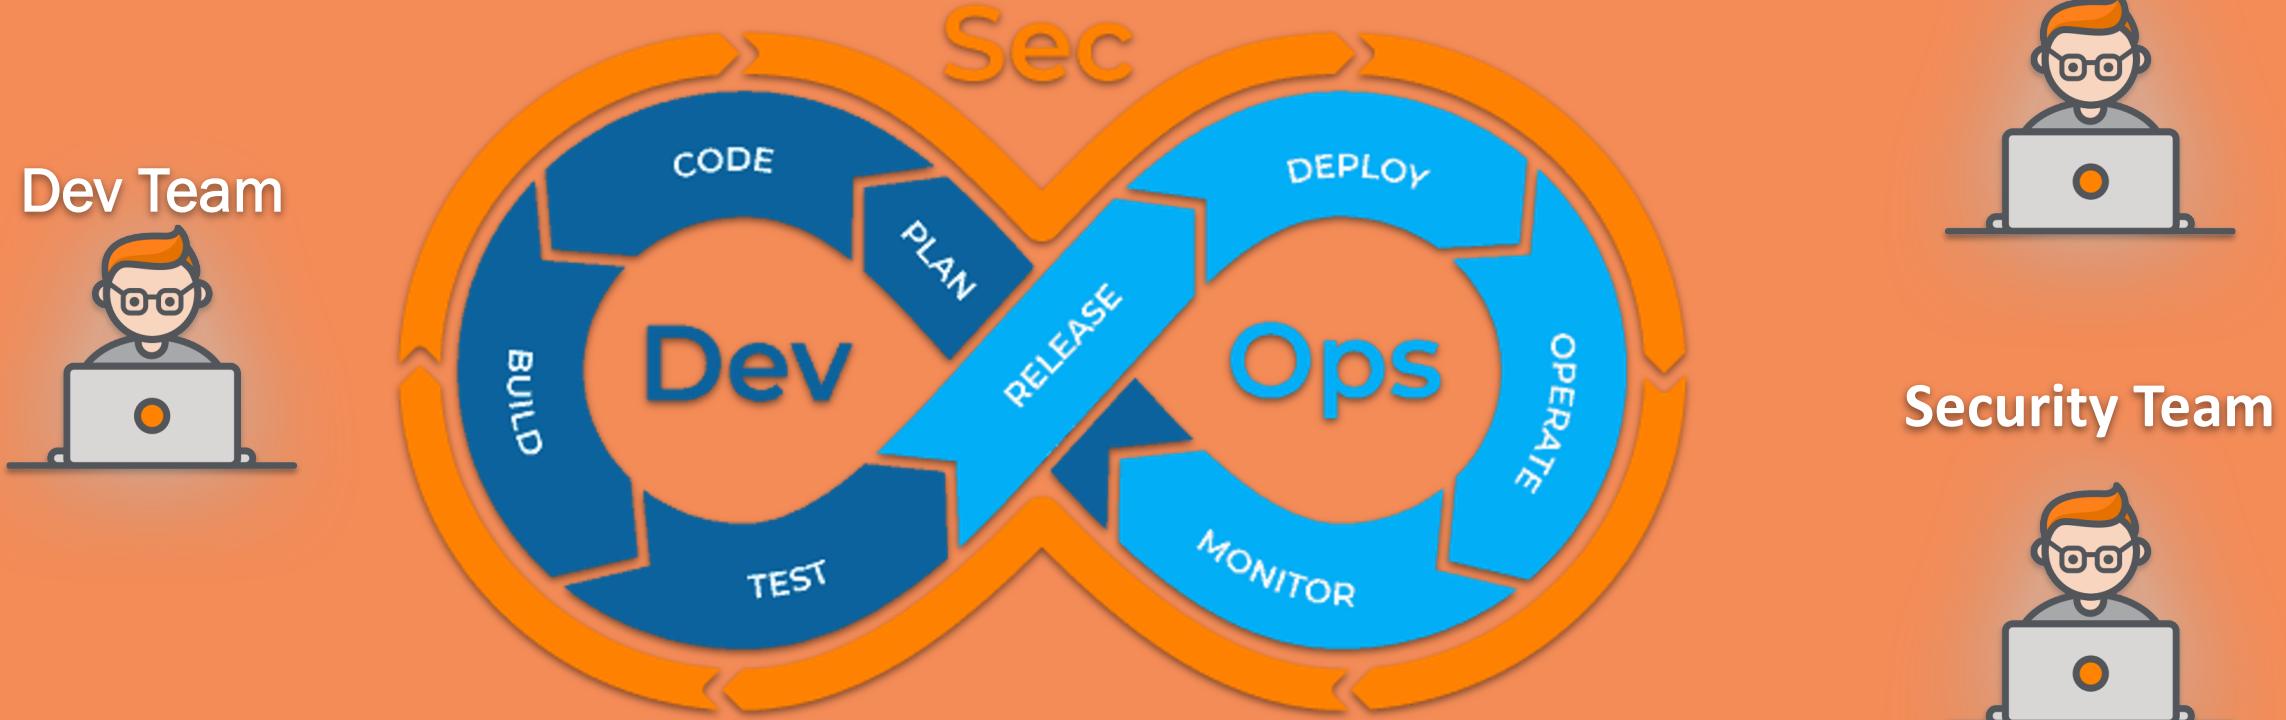

IT as Code

The primary difference between traditional IT and IT as Code is the mindset, method, and tools used to solve IT problems, deploy new solutions, and to deliver solutions in an agile approach.

RESISTANCE IS FUTILE, AUTOMATE

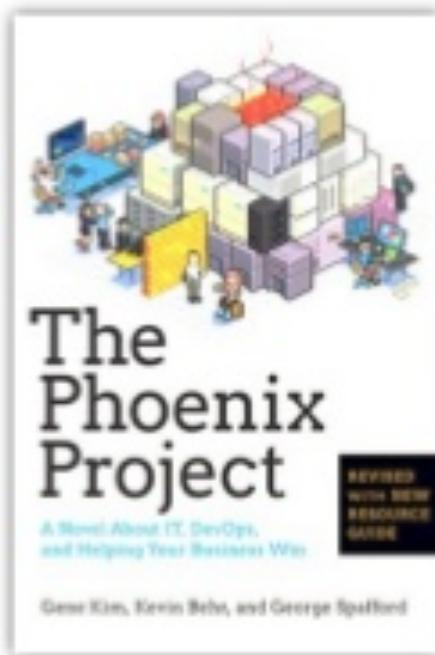

IT as Code Requires DevSecOps

DevSecOps added agile infrastructure [as code] to agile software development

DevSecOps added agile security [as code] to DevOps.

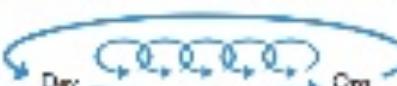

DEVSECOPS IS VERY PROMISING...

DEVOPS

1. Establish work flow

(Business) → Dev → Ops
2. Ensure instant feedback

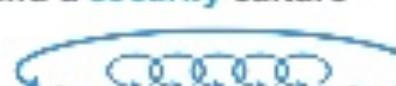

Dev → Ops
3. Culture of experimentation

Dev → [multiple stages] → Ops

DEVSECOPS

1. Establish **security** work flow

(Business) → Dev → Ops
2. Ensure instant **security** feedback

Dev → Ops
3. Build a **security** culture

Dev → [multiple stages] → Ops

Principles of DevSecOps

Instead of

configuring by hand

we

automate.

Instead of

manually responding
to alerts and events

we

create automation that helps cut down on
labor overhead and eliminates human error.

Instead of

being reactive

we

are proactive and use automation to deliver IT
as Code solutions in an agile approach.

Instead of

configuring security
manually

we

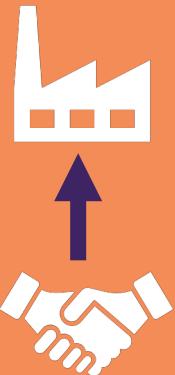

enforce security controls programmatically.

IT as Code via DevSecOps Automation Pipeline

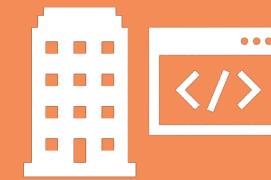

Procure

IT as Code

Run Job

API Request

Jenkins

Using a DevOps engineer mindset,

we move IT from manual to automated solutions using DevSecOps automation tools and CI/CD pipelines.

DevOps Engineer

Why CI/CD Pipelines for DevSecOps with Hybrid Cloud?

IT is shifting to software-defined everything,
not there yet

Shift Toward Everything-as-a-Service
Most organization not even close to 100% cloud

Moving to the cloud, still
requires hybrid approach

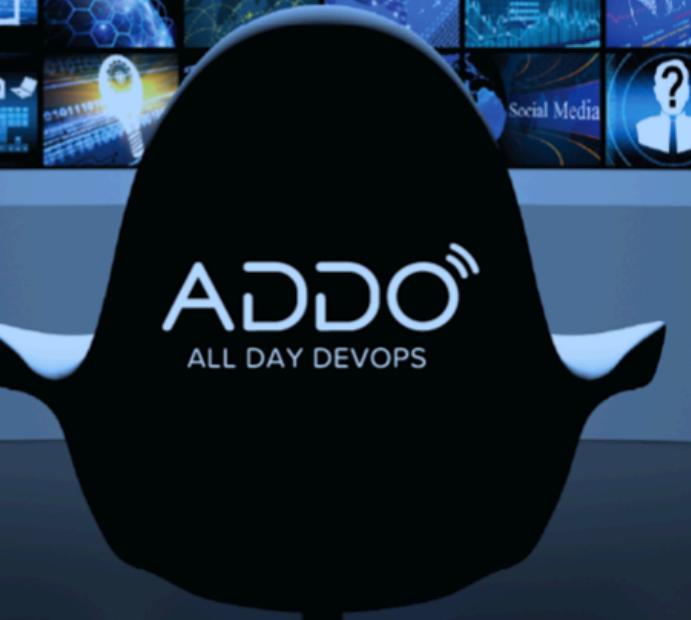

Configuration Complexity with IT as Code
In Hybrid Cloud Environments

SEE YOU IN THE FALL!
